Profile

I am a technical game designer with 5+ years of experience in Unity and Unreal Engine. When I design a mechanic or a system, I work out its details and depth, prototype it and make my decisions from how it feels in play. I started with mobile games: 50+ designs at my own studio, Tolian Games, and one soft-launched management game, Fancy Restaurant, with 300K+ downloads. I now focus on PC and console games in Unreal Engine.

Selected projects · case studies at aniltahmaz.com

Cinematic Turn-Based Combat · Technical & Combat Designer — Team of 7 · 5 weeks
Unreal Engine 5 · Blueprints · Level Sequencer

- Made every phase of a turn a Level Sequence. One camera setup frames any attacker and target.
- Designed the parry window on enemy attacks, the slow-motion counter on the last hit and the QTE multiplier.
- Built skills as data assets whose steps fire on sequence event keys. All 15 skills run on it. I wrote a 7-step workflow so teammates add skills and sequences on their own.

Horde & Boss Combat Design · Combat & Technical Designer — Team of 3 · 1 month
Unreal Engine 5 · Blueprints · Multiplayer

- Arranged move, attack and dodge windows with Anim Notifies. Each swing locks the player for only 0.2 s.
- Designed the player moveset and the hit feel: hit-stop, particles and ragdolls pushed in the attack direction.
- Put weapon stats, meshes and combos into a Data Table and Data Assets, so a new weapon is a row of data. Designed a three-phase boss fight with the team, built around arena objectives and enemy waves.

Parkour System & Level · Technical Designer — Solo · 1 week
Unity · C#

- Built each move as its own state and designed a level whose geometry shows each move before the player reaches it. A scripted camera move turns the 3D run into a side-scroller without a cut.

Also in the portfolio: Voxel Destruction System, Learn To Fly flight physics, Voice-Controlled Runner and Clean Energy.

Experience

Tolian Games, Ankara, Turkey · Co-Founder, Game Designer & Developer — 09/2021 – 12/2024

- Designed 50+ hybrid-casual mobile games with full design documents, and developed 10 of them (game list).
- Fancy Restaurant: built the core loop, upgrade system and economy. I reworked the design four times from funnel data and publisher feedback during a 7-month soft launch with 300K+ downloads.
- Led a team of 6 developers and artists, and prepared the backlog for each project.
- Designed the economy balance and monetization for every game. Tested games with the publishers Voodoo, Supersonic and CrazyLabs, and made the creative videos for each game I designed.

UDO Games, Ankara, Turkey · Game Developer & Designer — 03/2021 – 09/2021

- Developed 11 hyper-casual games and worked on a hit game as co-developer.
- Integrated third-party SDKs such as GameAnalytics and Facebook, and contributed to game design.

Indie, Ankara, Turkey · Game Designer & Developer — 10/2019 – 03/2021

- Designed and developed a horror PC game in Unity and an RPG PC game in Unreal Engine with Blueprints.
- Designed, developed and published 2 mobile games on Google Play, with AdMob and Google Play IAP.

Skills

Design	Systems, combat, level and economy design · Game feel · Prototyping · Design documents · Data analysis
Unreal Engine 5	Blueprints · Level Sequencer · Anim Montages and Notifies · Data Assets and Data Tables · Multiplayer
Unity	C# · Mobile performance · Monetization SDKs (AdMob, Google Play IAP)
Other	C++ · Python · Git · Jira · Machinations.io
Languages	English: IELTS overall band 7.5 (March 2025) · Turkish: native

Education

Hacettepe University, Turkey · Master's Degree, Computer Animation and Game Technologies — 2021

Bilkent University, Turkey · BS, Electrical and Electronics Engineering — 2019
